

ABSTRACT

Changer apparatus for information discs

The invention relates to a changer apparatus for information discs, comprising

- a stacking unit for stacking at least two information discs in at least two stacking positions,
- 5 - a read/write unit for reading information stored on the information discs and/or writing information on the information discs in a play position,

an eject position being provided in which an information disc can be removed from the apparatus,

- 10 In such a changer apparatus transport means have been provided for moving the information discs from the eject position into a loading position of the stacking unit along a curve-shaped loading path.
